Education

Bennett University — Greater Noida, UP
Bachelor of Technology in Computer Science and Engineering (Artificial Intelligence) — *Expected May 2028*

- CGPA: 7.4/10.0
- Relevant Coursework: Data Structures & Algorithms, AI, Machine Learning, Linear Algebra, OOP

Technical Skills

Programming Languages: Python (Proficient), C++ (DSA), TypeScript, JavaScript
Web & Backend: FastAPI, React, SQLAlchemy, Alembic, MongoDB, REST APIs, Google OAuth, Razorpay API
Data Science & AI/ML: NumPy, Pandas, Scikit-learn, Matplotlib, Google Gemini API
Developer Tools: Git, GitHub, GitHub Actions, pytest, Vercel, VS Code, Jupyter Notebooks
Core Competencies: Data Wrangling, Time-Series Analysis, Predictive Modeling, Backtesting, Risk Analytics

Technical Projects

BidPulse: British-Auction RFQ Platform | *Python, FastAPI, PostgreSQL, Redis, React, TypeScript* — 2026
Live demo · Code · Solo project

- Built a freight RFQ platform where carriers undercut each other in a live British auction; bids near the deadline extend it automatically, never past the forced close, which the engine, the API and a database CHECK constraint all enforce.
- Row-locked bids (tested with 8 simultaneous last-second bids), 3 load-balanced API replicas synced via Redis, 102 tests.

Freight Invoice Auditing Agent | *Python, FastAPI, Pydantic, Gemini API, React, TypeScript* — 2026
Live demo · Code · Solo project

- An LLM extracts carrier invoices; a deterministic rule engine audits every line for 8 types of overcharge.
- Built a labelled synthetic test set (5 invoice layouts, one held out) and ran an ablation: letting the LLM judge gave 65.7% precision and USD 7,030 in false claims vs 98.1% and USD 138 for the hybrid.
- Shipped reviewer sign-in, approval-gated disputes, a hash-chained audit log and 97 tests in CI; deployed on Vercel.

Algo Trade Simulator | *Python, FastAPI, React, TypeScript, MongoDB, Gemini API* — 2026
Live demo · Code · Team project with Yashika Garg

- Built a full-stack backtesting platform that simulates trades on real market data with fees, slippage and no look-ahead bias, benchmarked against buy & hold and the S&P 500 on Sharpe, Sortino, drawdown and beta.
- Implemented walk-forward testing (tune on the past year, trade the next quarter on unseen data), which showed a tuned strategy's return falling from 24% to 11% a year out of sample.
- Wrote a logistic-regression strategy from scratch with time-aware retraining, and a Gemini copilot that runs backtests via function calling; Google OAuth, 107 tests in CI, deployed on Vercel.

RazorGrowth: Permissioned AI Revenue-Recovery Agent | *Python, FastAPI, React, TypeScript* — 2026
Live demo · Code · Razorpay AI Buildathon 2026 · Solo project

- Built a Gemini tool-calling agent that investigates failed payments with read-only tools and proposes Razorpay recovery campaigns; every proposal must pass schema validation, a deterministic policy engine and explicit human approval.
- Built an evaluation harness on a deterministic market simulator; it exposed a bug in the agent's outcome estimates, and after the fix the agent beats a heuristic baseline by 2.3%.
- Safe execution: atomic approvals, idempotent Razorpay calls, HMAC-verified webhooks, an audit trail, 70 tests in CI.

AgriGuard: Satellite Imagery Crop Analysis | *Python, Scikit-learn, Sentinel-2 Data* — 2026

- Classified crop types and detected crop diseases from multispectral Sentinel-2 imagery on large Kaggle datasets.

Leadership & Experience

Management Lead · *Sportikon 3.0* — 2025

Certifications

HackerRank: Problem Solving (Intermediate), Problem Solving (Basic)
Coursera: Automata and Computability (BITS Pilani), The Bits and Bytes of Computer Networking and Operating Systems and You (Google), Introduction to Microprocessors (Arm), Entrepreneurship Strategy (HEC Paris), Ethics for Engineers
